PROFILE

Computer Science student at VIT-AP University with experience building intelligent applications, scalable backend systems, and full-stack web applications. Skilled in Java, Python, TypeScript, and modern software engineering practices, with interests in distributed systems, machine learning, and large-scale software development.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, TypeScript, JavaScript

Web & Backend: Next.js, React, HTML, CSS, REST APIs, SQL

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOP)

ML: Machine Learning, Computer Vision, CNN, TensorFlow/Keras, scikit-learn

LLM Applications: Gemini API, LiteLLM, Prompt Engineering, Structured Outputs, AI Pipeline Development

Tools & Platforms: Git, GitHub

EDUCATION

B.Tech – Computer Science Engineering | VIT-AP UNIVERSITY | CGPA: **8.87** | 2024 – Present (Expected 2028)

Intermediate – NARAYANA JUNIOR COLLEGE | **96%** | 2022 – 2024

Secondary School – BHASHYAM HIGH SCHOOL | **95.6%** | 2021 – 2022

PROJECTS

Atlas Intelligence Pipeline | [GitHub](#)

Python · AsyncIO · SQLite · LiteLLM · BeautifulSoup

- Engineered an asynchronous intelligence pipeline **processing 3,000+ records** across startups, products, research papers, jobs, and news from five public data sources.
- Built a hybrid extraction engine combining deterministic parsing, LiteLLM fallback orchestration, and structured validation for reliable data extraction.
- Implemented semantic entity resolution using sentence-transformers and RapidFuzz, **resolving 3,400+ entity relationships**.
- Developed telemetry, duplicate detection, retry mechanisms, dead-letter queue handling, and a monitoring dashboard for pipeline observability.

Genesis — AI-Powered Application Generation Platform | [GitHub](#)

Next.js · TypeScript · Gemini API · Zod

- Engineered a four-stage AI pipeline transforming natural language prompts into validated application schemas through intent extraction, architecture generation, schema generation, and automated validation.
- Designed a validation engine executing 18 integrity checks using Zod schemas and intelligent field mapping for type-safe outputs.
- Built a self-healing schema repair system with automated retries, reducing validation failures.
- Developed an interactive runtime and analytics dashboard for real-time schema visualization and performance monitoring.

Saurashtra Character Recognition System | [GitHub](#)

Python · TensorFlow · CNN · Computer Vision

- Developed an end-to-end OCR system for the low-resource Saurashtra script using CNNs and computer vision.
- Built and augmented a dataset of 850+ labeled images across 85 classes, achieving **99% training and 97–98% validation accuracy**.
- Developed a real-time prediction interface for handwritten character recognition with confidence scores.

ACHIEVEMENTS & ACTIVITIES

- Pitched **TinkedOut**, an ML-powered engineer collaboration platform, at the Wadhvani Entrepreneurship Portal.
- Active member of the Machine Learning Club at VIT-AP University.

CERTIFICATIONS

Certified By Forage in Software Engineering Job Simulation – Mar 2026

Certified By Infosys Springboard as Angular Web Developer – Apr 2026
